

Lasso KONG Cable Lock Instructions

- 1 Guide Point
- 2 Lock Post
- 3 Reset Dial
- 4 Number Dials
- 5 Combo Slot
- 6 Key Slot

- 7 Searching Key
- 8 Setting Button (In pre-set position)
- 9 Setting Button (In set position)

First Time Use – Initial Setting of Your Combination:

1. Line up the guide point with the default combination: 0-0-0-0. (Figure 1)
2. Pull the lock apart. If you have aligned the combination correctly, the cable should separate easily.
3. Push down the center of the Reset Dial until you feel it click into place. (Figure 3)
4. Choose your desired combination by lining your selection up with the guide point.
5. Taking care not to move the number dials, return the Reset Dial to its original position by flipping the setting button back up until you feel it click again.
6. **IMPORTANT!** To verify your new combination before using your lock, insert the lock post all the way into the barrel but do not turn the dials. Remove the lock post and your Lasso is now ready for use.

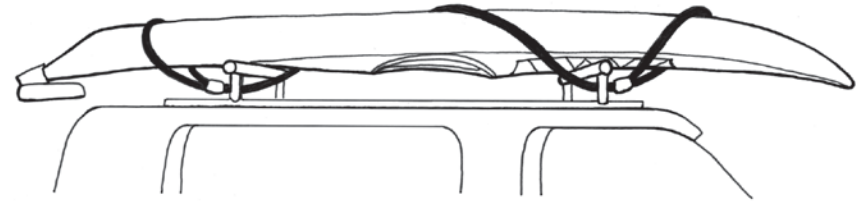

Using the Combo Searching Key:

This feature allows you to reset an improperly set or forgotten combination. To use this function, your lock must be unlocked from the Key Slot. (Figure 2)

1. Insert Searching Key into the slot provided until it stops. (Figure 2)
2. Turn the first Number Dial until you feel the searching key slide in further. When the correct number has been found and the pin is fully inserted, that number will no longer turn. This is how you know it is right.
3. Continue with procedure 2 & 3 on the second, third and fourth dials until the Searching Key is fully inserted and the combo mechanism releases from the opposite side of the lock.
4. Write down your combo for future reference, or if you wish to choose a new combination, return to “First Time Use” steps 2 – 4.

Secure your next adventure.™

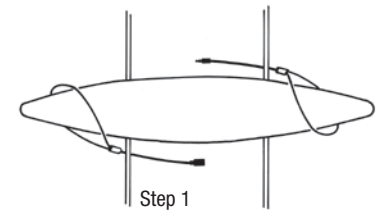

Cable locks for your kayak

Congratulations on your purchase of the best theft deterrent available for your Kayak.

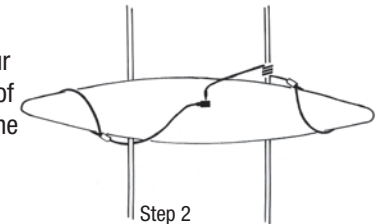

Installation is simple ...

1. Secure your kayak on any standard rooftop rack according to manufacturers instructions.
Be sure that your roof racks are locked to the vehicle.

2. Loop Lasso ends around bow and stern of your kayak with the cable running under the rack.

Pull the large loops as close to the middle of your kayak as possible. Wrap Lasso around the bars of your roof rack to take up the slack and tighten the cable. Now secure the cable lock and you are done with the installation. It's that simple.

- ◆ You can use your Lasso to secure your kayak to many stationary objects.

◆ IMPORTANT!

Before each use, check that your combination is correct!
